Guns, Germs, and Steel: The Fates of Human Societies By Jared Diamond Ph.D.

"Fascinating.... Lays a foundation for understanding human history."?Bill Gates

Winner of the Pulitzer Prize, *Guns, Germs, and Steel* is a brilliant work answering the question of why the peoples of certain continents succeeded in invading other continents and conquering or displacing their peoples. This edition includes a new chapter on Japan and all-new illustrations drawn from the television series. Until around 11,000 BC, all peoples were still Stone Age hunter/gatherers. At that point, a great divide occurred in the rates that human societies evolved. In Eurasia, parts of the Americas, and Africa, farming became the prevailing mode of existence when indigenous wild plants and animals were domesticated by prehistoric planters and herders. As Jared Diamond vividly reveals, the very people who gained a head start in producing food would collide with preliterate cultures, shaping the modern world through conquest, displacement, and genocide. The paths that lead from scattered centers of food to broad bands of settlement had a great deal to do with climate and geography. But how did differences in societies arise? Why weren't native Australians, Americans, or Africans the ones to colonize Europe? Diamond dismantles pernicious racial theories tracing societal differences to biological differences. He assembles convincing evidence linking germs to domestication of animals, germs that Eurasians then spread in epidemic proportions in their voyages of discovery. In its sweep, *Guns, Germs and Steel* encompasses the rise of agriculture, technology, writing, government, and religion, providing a unifying theory of human history as intriguing as the histories of dinosaurs and glaciers. 32 illustrations

Editorial Review

Amazon.com Review

Explaining what William McNeill called *The Rise of the West* has become the central problem in the study of global history. In *Guns, Germs, and Steel* Jared Diamond presents the biologist's answer: geography, demography, and ecological happenstance. Diamond evenhandedly reviews human history on every continent since the Ice Age at a rate that emphasizes only the broadest movements of peoples and ideas. Yet his survey is binocular: one eye has the rather distant vision of the evolutionary biologist, while the other eye--and his heart--belongs to the people of New Guinea, where he has done field work for more than 30 years.

From Library Journal

Most of this work deals with non-Europeans, but Diamond's thesis sheds light on why Western civilization became hegemonic: "History followed different courses for different peoples because of differences among peoples' environments, not because of biological differences among peoples themselves." Those who domesticated plants and animals early got a head start on developing writing, government, technology, weapons of war, and immunity to deadly germs. (LJ 2/15/97)

From Kirkus Reviews

MacArthur fellow and UCLA evolutionary biologist Diamond (The Third Chimpanzee, 1992, etc.) takes as his theme no less than the rise of human civilizations. On the whole this is an impressive achievement, with nods to the historians, anthropologists, and others who have laid the groundwork. Diamond tells us that the impetus for the book came from a native New Guinea friend, Yali, who asked him, ``Why is it that you white people developed so much cargo and brought it to New Guinea, but we black people had little cargo of our own?'' The long and short of it, says Diamond, is biogeography. It just so happened that 13,000 years ago, with the ending of the last Ice Age, there was an area of the world better endowed with the flora and fauna that would lead to the take-off toward civilization: that valley of the Tigris and Euphrates rivers we now call the Fertile Crescent. There were found the wild stocks that became domesticated crops of wheat and barley. Flax was available for the development of cloth. There was an abundance of large mammals that could be domesticated: sheep, goats, cattle. Once agriculture is born and animals domesticated, a kind of positive feedback drives the growth toward civilization. People settle down; food surpluses can be stored so population grows. And with it comes a division of labor, the rise of an elite class, the codification of rules, and language. It happened, too, in China, and later in Mesoamerica. But the New World was not nearly as abundant in the good stuff. And like Africa, it is oriented North and South, resulting in different climates, which make the diffusion of agriculture and animals problematic. While you have heard many of these arguments before, Diamond has brought them together convincingly. The prose is not brilliant and there are apologies and redundancies that we could do without. But a fair answer to Yali's question this surely is, and gratifyingly, it makes clear that race has nothing to do with who does or does not develop cargo. From reader reviews:

Cheryl Dawkins:

Here thing why this particular Guns, Germs, and Steel: The Fates of Human Societies are different and dependable to be yours. First of all looking at a book is good but it depends in the content of it which is the content is as yummy as food or not. Guns, Germs, and Steel: The Fates of Human Societies giving you information deeper and in different ways, you can find any reserve out there but there is no e-book that similar with Guns, Germs, and Steel: The Fates of Human Societies. It gives you thrill reading journey, its open up your current eyes about the thing which happened in the world which is possibly can be happened around you. You can easily bring everywhere like in area, café, or even in your approach home by train. For anyone who is having difficulties in bringing the imprinted book maybe the form of Guns, Germs, and Steel: The Fates of Human Societies in e-book can be your alternative.

Gregory Sims:

Hey guys, do you desires to finds a new book to see? May be the book with the title Guns, Germs, and Steel: The Fates of Human Societies suitable to you? Often the book was written by well known writer in this era. Often the book untitled Guns, Germs, and Steel: The Fates of Human Societies is the one of several books this everyone read now. This book was inspired lots of people in the world. When you read this guide you will enter the new dimensions that you ever know ahead of. The author explained their concept in the simple way, and so all of people can easily to know the core of this book. This book will give you a lot of information about this world now. To help you see the represented of the world with this book.

David Dabbs:

Reading a guide tends to be new life style in this era globalization. With reading through you can get a lot of information that may give you benefit in your life. Using book everyone in this world could share their idea. Publications can also inspire a lot of people. Lots of author can inspire their very own reader with their story as well as their experience. Not only situation that share in the publications. But also they write about the ability about something that you need example. How to get the good score toefl, or how to teach your kids, there are many kinds of book which exist now. The authors nowadays always try to improve their talent in writing, they also doing some analysis before they write for their book. One of them is this Guns, Germs, and Steel: The Fates of Human Societies.

Gerald Velasco:

As a college student exactly feel bored to help reading. If their teacher requested them to go to the library or make summary for some publication, they are complained. Just minor students that has reading's heart and soul or real their hobby. They just do what the instructor want, like asked to the library. They go to at this time there but nothing reading seriously. Any students feel that examining is not important, boring along with can't see colorful pics on there. Yeah, it is to be complicated. Book is very important for yourself. As we know that on this age, many ways to get whatever we would like. Likewise word says, many ways to reach Chinese's country. So , this Guns, Germs, and Steel: The Fates of Human Societies can make you truly feel more interested to read.
