Statistics for Chemical and Process Engineers: A Modern Approach By Yuri A.W. Shardt

A coherent, concise and comprehensive course in the statistics needed for a modern career in chemical engineering; covers all of the concepts required for the American Fundamentals of Engineering examination.

This book shows the reader how to develop and test models, design experiments and analyse data in ways easily applicable through readily available software tools like MS Excel® and MATLAB®. Generalized methods that can be applied irrespective of the tool at hand are a key feature of the text.

The reader is given a detailed framework for statistical procedures covering:

- data visualization;
- probability;
- linear and nonlinear regression;
- experimental design (including factorial and fractional factorial designs); and
- dynamic process identification.

Main concepts are illustrated with chemical- and process-engineering-relevant examples that can also serve as the bases for checking any subsequent real implementations. Questions are provided (with solutions available for instructors) to confirm the correct use of numerical techniques, and templates for use in MS Excel and MATLAB can also be downloaded from extras.springer.com.

With its integrative approach to system identification, regression and statistical theory, *Statistics for Chemical and Process Engineers* provides an excellent means of revision and self-study for chemical and process engineers working in experimental analysis and design in petrochemicals, ceramics, oil and gas, automotive and similar industries and invaluable instruction to advanced

undergraduate and graduate students looking to begin a career in the process industries.

Editorial Review

From the Back Cover

This book shows the reader how to develop and test models, design experiments and analyse data in ways easily applicable through readily available software tools like MS Excel® and MATLAB®. Generalized methods that can be applied irrespective of the tool at hand are a key feature of the text.

The reader is given a detailed framework for statistical procedures covering:

- data visualization;
- probability;
- linear and nonlinear regression;
- experimental design (including factorial and fractional factorial designs); and
- dynamic process identification.

Main concepts are illustrated with chemical- and process-engineering-relevant examples that can also serve as the bases for checking any subsequent real implementations. Questions are provided (with solutions available for instructors) to confirm the correct use of numerical techniques, and templates for use in MS Excel and MATLAB can also be downloaded from extras.springer.com.

With its integrative approach to system identification, regression and statistical theory, *Statistics for Chemical and Process Engineers* provides an excellent means of revision and self-study for chemical and process engineers working in experimental analysis and design in petrochemicals, ceramics, oil and gas, automotive and similar industries and invaluable instruction to advanced undergraduate and graduate students looking to begin a career in the process industries.

About the Author

Prof. Dr. Yuri A. W. Shardt is currently an assistant professor at the University of Waterloo in the Department of Chemical Engineering, working in the field of process identification and monitoring with an emphasis on the development and industrial implementation of soft sensors. Previously, he worked at the University of Duisburg-Essen in the Institute of Control and Complex Systems (Fachgebiet Automatisierungstechnik und komplexe Systeme, AKS) as an Alexander von Humboldt Fellow. He has written 14 papers appearing in such journals as *Automatica*, *Journal of Process Control*, *IEEE Transactions on Industrial Electronics*, and *Industrial and Engineering Chemistry Research* on topics ranging from system identification, soft sensor development, to process control. He has presented his research at numerous conferences and taught various courses in the intersection between statistics, chemical engineering, process control, EXCEL®, and MATLAB®. Prof. Dr. Shardt completed his doctoral degree under the supervision of Prof. Dr. Biao Huang at the University of Alberta. His thesis examined the methods for extracting valuable data for system identification from data historians for application to soft sensor design. In addition to his

academic work, he has spent considerable time in industry working on implementing various process control solutions. He also has interests in linguistics, as well as software internationalisation and localisation.

Users Review

From reader reviews:

Bonnie Fernandez:

The book Statistics for Chemical and Process Engineers: A Modern Approach can give more knowledge and also the precise product information about everything you want. Why then must we leave a good thing like a book Statistics for Chemical and Process Engineers: A Modern Approach? Wide variety you have a different opinion about e-book. But one aim that will book can give many data for us. It is absolutely proper. Right now, try to closer together with your book. Knowledge or facts that you take for that, you are able to give for each other; you could share all of these. Book Statistics for Chemical and Process Engineers: A Modern Approach has simple shape however, you know: it has great and large function for you. You can look the enormous world by available and read a e-book. So it is very wonderful.

Benjamin Chambers:

Book is to be different for each grade. Book for children right up until adult are different content. As you may know that book is very important normally. The book Statistics for Chemical and Process Engineers: A Modern Approach has been making you to know about other know-how and of course you can take more information. It is quite advantages for you. The publication Statistics for Chemical and Process Engineers: A Modern Approach is not only giving you more new information but also to become your friend when you sense bored. You can spend your current spend time to read your publication. Try to make relationship while using book Statistics for Chemical and Process Engineers: A Modern Approach. You never sense lose out for everything when you read some books.

Jaclyn Warner:

The actual book Statistics for Chemical and Process Engineers: A Modern Approach has a lot info on it. So when you check out this book you can get a lot of profit. The book was compiled by the very famous author. This articles author makes some research before write this book. This specific book very easy to read you can find the point easily after scanning this book.

Kevin Williams:

E-book is one of source of expertise. We can add our information from it. Not only for students but in addition native or citizen require book to know the update information of year in order to year. As we know those publications have many advantages. Beside we add our knowledge, could also bring us to around the world. By book Statistics for Chemical and Process Engineers: A Modern Approach we can have more advantage. Don't someone to be creative people? To become creative person must love to read a book. Simply choose the best book that acceptable with your aim. Don't be doubt to change your life at this time book Statistics for Chemical and Process Engineers: A Modern Approach. You can more desirable than now.
