Once considered a rare condition, hemochromatosis is now acknowledged as one of the commonest inherited disorders, affecting one in two hundred people of Western Caucasian descent and in the U.S. alone, over one million people. This is the most comprehensive clinical reference yet on hemochromatosis. The international team of 94 authors from twelve countries includes specialists in internal medicine, hematology, hepatology, genetics, biochemistry, and molecular biology. In 57 in-depth chapters they cover all aspects of pathophysiology, epidemiology, diagnosis and treatment. The text thoroughly explains the latest developments in the genetics of the disorder, including sections on screening, diagnostic techniques, and clinical complications.
