Cutaneous Adnexal Tumors By Dmitry V. Kazakov MD PhD, Phillip McKee MD, Michal Michal MD, Dr. Denise Kacerovska MD PhD

Adnexal tumors of the skin are complex, with confusing nomenclature. Many lesions show marked variation in histological appearance and there is considerable morphological overlap between different entities. These tumors are relatively rare, compared for example with melanocytic lesions, but still are part of everyday routine work for all histopathologists. Therefore, many general pathologists (the majority of whom are obliged to report dermatopathology specimens) are unfamiliar with the topic and even the experts have difficulties with the more challenging cases. Although the majority of adnexal tumors represent benign lesions, malignant counterparts do occur and these often represent a diagnostic pitfall. There are many inherited syndromes in which cutaneous adnexal tumors are a feature, and failure to recognize these associations may have serious implications. The proposed book will be comprehensive and will include all recognized variants covering the broad spectrum of adnexal tumor pathology. Included will also be chapters dealing with site-specific lesions such as the eyelid, neck, navel, anogenital areas, etc. The format will be extremely user-friendly comprising succinct text and comprehensive microscopic illustrations. The scope will be such that any variation on the theme of adnexal tumor pathology will be readily available at a glance. The text will be structured as follows: clinical features, histology, immunohistochemistry, genetic features and differential diagnosis.

Editorial Review

Review

"This is an excellent resource for the diagnosis of cutaneous adnexal tumors for general pathologists as well as dermatopathologists. Anyone who has previously struggled with diagnosing an adnexal tumor will quickly realize this book is an invaluable addition to their personal library!"

Weighted Numerical Score: 85 - 3 Stars

Users Review

From reader reviews:

Bobby Griffin:

Within other case, little persons like to read book Cutaneous Adnexal Tumors. You can choose the best book if you love reading a book. So long as we know about how is important a new book Cutaneous Adnexal Tumors. You can add know-how and of course you can around the world with a book. Absolutely right, since from book you can learn everything! From your country until finally foreign or abroad you may be known. About simple factor until wonderful thing you may know that. In this era, you can open a book or searching by internet device. It is called e-book. You may use it when you feel bored to go to the library. Let's study.

Mark Clark:

What do you with regards to book? It is not important with you? Or just adding material if you want something to explain what the one you have problem? How about your spare time? Or are you busy man or woman? If you don't have spare time to perform others business, it is give you a sense of feeling bored faster. And you have extra time? What did you do? Every individual has many questions above. They should answer that question since just their can do in which. It said that about reserve. Book is familiar on every person. Yes, it is appropriate. Because start from on guardería until university need that Cutaneous Adnexal Tumors to read.

Beverly Hummell:

Your reading sixth sense will not betray a person, why because this Cutaneous Adnexal Tumors publication written by well-known writer we are excited for well how to make book which might be understand by

anyone who else read the book. Written within good manner for you, still dripping wet every ideas and writing skill only for eliminate your hunger then you still skepticism Cutaneous Adnexal Tumors as good book not simply by the cover but also with the content. This is one book that can break don't assess book by its deal with, so do you still needing an additional sixth sense to pick that!? Oh come on your studying sixth sense already alerted you so why you have to listening to one more sixth sense.

Omar Lamm:

Reading a book for being new life style in this season; every people loves to study a book. When you study a book you can get a lots of benefit. When you read books, you can improve your knowledge, because book has a lot of information on it. The information that you will get depend on what kinds of book that you have read. If you need to get information about your review, you can read education books, but if you act like you want to entertain yourself look for a fiction books, this kind of us novel, comics, as well as soon. The Cutaneous Adnexal Tumors will give you new experience in studying a book.
