**Finance: Markets, Instruments & Investments (Second Edition)** By Hans Bystrom

Finance: Markets, Instruments & Investments provides a comprehensive yet relatively short and non-technical introduction to financial markets and the principal financial instruments traded there. The basic concepts behind rational investment strategies in these markets are also covered. The material is up-to-date and, in addition to the treatment of traditional financial markets such as bond, stock and derivatives markets, the book provides an overview of the market for credit and credit derivatives, the arena for the recent financial crisis. The book is written with a wide readership in mind. It is suitable for introductory finance courses at the undergraduate or MBA level, but anyone who needs a basic understanding, or refresher in the core principles of finance, will find it helpful. Since the level of mathematical analysis has been consciously kept to a minimum, readers will find that the book requires only the most elementary knowledge of mathematics and statistics. The appendix contains the most important statistical concepts. Each chapter ends with a list of questions with complete answers and solutions. The book's website contains additional study material.
