Social Networks and Natural Resource Management: Uncovering the Social Fabric of Environmental Governance From imusti

Social Network Analysis (SNA), a quantitative approach to the study of social relations, has recently emerged as a key tool for understanding the governance of natural resources. Bringing together contributions from a range of researchers in the field, this is the first book to fully explore the potential applications of SNA in the context of natural resource management. Topics covered include the role of SNA in stakeholder selection; improving fisheries management and conservation; the effect of social network ties on public satisfaction and agrarian communication networks. Numerous case studies link SNA concepts to the theories underlying natural resource governance, such as social learning, adaptive co-management and social movements theory. Reflecting on the challenges and opportunities associated with this evolving field, this is an ideal resource for students and researchers involved in many areas of natural resource management, environmental biology, sustainability science and sociology.

Editorial Review

Review

"... a rigorous conceptual framework of SNA at the beginning of the book weaves the contributing case studies of natural resource management into an integrated whole."

Janne I. Hukkinen, Journal of Integrative Environmental Sciences

"The book achieves its objective admirably well... [as] an edited volume, a rigorous conceptual framework of SNA at the beginning of the book weaves the contributing case studies of natural resource management into an integrated whole. The concluding chapter is ambitious and successful in synthesizing the central theoretical and methodological challenges for future work in the field. Academics and professionals working in natural resource governance are also likely to find the book very useful."

Janne I. Hukkinen, Environmental Policy Research Group (EPRG), University of Helsinki, Journal of Integrative Environmental Sciences

About the Author

Örjan Bodin is a researcher at the Stockholm Resilience Centre at Stockholm University, Sweden. He is particularly interested in using network analysis to study various aspects of ecosystems governance.

Christina Prell is an Assistant Professor in Sociology at the University of Maryland, College Park. She uses mixed methods to explore the role that social networks play in different research contexts.

Users Review

From reader reviews:

Jennie Miller:

Information is provisions for folks to get better life, information presently can get by anyone on everywhere. The information can be a knowledge or any news even a huge concern. What people must be consider whenever those information which is inside former life are challenging be find than now's taking seriously which one would work to believe or which one the resource are convinced. If you get the unstable resource then you understand it as your main information you will see huge disadvantage for you. All of those possibilities will not happen in you if you take Social Networks and Natural Resource Management: Uncovering the Social Fabric of Environmental Governance as your daily resource information.

Julia Faulkner:
