In Detail

The world of mobile development is extremely fragmented with many platforms, frameworks, and technologies available. Ionic is intended to fill that gap, by enabling developers to build apps that have a native feel to them, using web technologies such as HTML, CSS, and AngularJS. Ionic makes it easy for front-end developers to become app developers. The framework provides superior performance with deep Cordova integration and a comprehensive set of tools for prototyping, backend support, and deployment.

Ionic Cookbook takes you through the process of developing a cross-platform mobile app using just HTML5 and the JavaScript-based Ionic.

You will start with an introduction to the CLI and then move on to building and running an app. You will explore common features of real-world mobile apps such as authenticating a user, and getting and saving data using either Firebase or Local Storage. Next, the book covers how Ionic integrates with Cordova to support native device features using ngCordova, and you will discover how to take advantage of existing modules around its ecosystem. You will also delve into advanced topics, including how to extend Ionic to create new components. Finally, the book will walk you through customizing the Ionic theme and building the app so that it can be deployed to all platforms.

Style and approach

This book follows a recipe-based approach to cross-platform mobile app development, where each task is explained in a conversational and easy-to-follow style. Every topic explains individual features or components of Ionic, and provides extra details for readers to come up with custom solutions based on real-world applications.

About the Author

Hoc Phan

Hoc Phan is a technologist with a lot of experience in frontend development. He started programming at the age of 12 with Pascal and Assembly on a 486 computer. The way he learned was to start practicing right away even before figuring out concepts. Hoc worked on many JavaScript projects in the past by teaching himself the framework using various online sources. He was one of the first few developers who tested Ionic for its feasibility as a JavaScript replacement of the native language of a device. He wrote the Full Stack Mobile App with Ionic Framework book (for more information, visit http://www.amazon.com/Full-Stack-Mobile-Ionic-Framework-ebook/dp/B00QF1H380/), which was very well-received. He has worked for both start-ups and large companies. By frequently speaking at local meet-ups as well as cloud computing / Big Data industry events and conferences, he learns from other experts. He holds an MBA degree from the University of Washington's Michael G. Foster School of Business.
