Environmental Microbiology By Raina M. Maier, Ian L. Pepper, Charles P. Gerba

The field of environmental microbiology encompasses aspects of several areas of study including microbial ecology, molecular genetics, and environmental science. **Environmental Microbiology** is the first book to offer a comprehensive discussion of this field as a discipline, which the authors define as the study of microbial fate and activity in air, water, and soil, and the resulting impact on human health and welfare. While the roots of environmental microbiology can be traced to sanitary engineering (water and wastewater treatment), the field has grown to include other practical issues such as bioremediation, the control of known and emerging waterborne pathogens, microbial risk assessment, and environmental biotechnology. Five general areas are emphasized in this text: (i) Foundation chapters, (ii) microbial environments, (iii) detection of microbial activity, (iv) the impact of microbial activity on the environment in terms of nutrient cycling and pollutant fate, and (v) detection and control of pathogens in the environment. Designed for courses at senior undergraduate and graduate levels, Environmental Microbiology will also serve as an essential reference for environmental microbiologists, microbial ecologists, and environmental engineers, as well as those interested in epidemiology, water and wastewater treatment, and biotechnology.

Key Features

Among the Highlights of this state-of-the-art Textbook:

- * Includes foundation chapters for background in biological and earth sciences
- * Covers emerging areas such as transport

Editorial Review

Review

"This book... provides a good source of reference of many of the important concepts relating to environmental microbiology... It would be a useful text for undergraduate students with interests in this area of microbiology... The information is well written and presented and is supported by good figures and tables, as well as case studies, which are effectively used to highlight particular issues."

About the Author

Dr. Ian Pepper is currently a Professor at the University of Arizona. He is also Director of the University of Arizona, Environmental Research Laboratory (ERL) and the NSF Water and Environmental Technology (WET) Center. Dr. Pepper is an environmental microbiologist specializing in the molecular ecology of the environment. His research has focused on the fate and transport of pathogens in air, water, soils and wastes. His expertise has been recognized by membership on six National Academy of Science Committees and former memberships on an EPA FIFRA Science and Advisory Panel. Dr. Pepper is a Fellow of the American Association for the Advancement of Science, American Academy of Microbiology, the Soil Science Society of America, and the American Society of Agronomy. He is also a Board Certified Environmental Scientist within the American Academy of Environmental Engineers and Scientists. He is the author or co-author of six textbooks; 40 book chapters; and over 180 peer-review journal articles.

Dr. Charles P. Gerba is a Professor at the University of Arizona. He conducts research the transmission of

pathogens through the environment. His recent research encompasses the transmission of pathogens by water, food and fomites; fate of pathogens in land applied wastes; development of new disinfectants; domestic microbiology and microbial risk assessment. He has been an author on more than 500 articles including several books in environmental microbiology and pollution science. He is a fellow of the American Academy of Microbiology and the American Association for the Advancement of Science. In 1998 he received the A. P. Black Award from the American Water Works Association for outstanding contributions to water science and in 1996 he received the McKee medal from the Water Environment Federation for outstanding contributions to groundwater protection. He received the 1999 Award of Excellence in Environmental Health from National Association of County and City Health Officials.
